	a po			

A rare and widespread significant wind event impacted the NWS Jackson, MS forecast area during the evening of Aug 2nd and lasted into the early morning hours of Aug 3rd. Several clusters of storms developed across Northern Mississippi and Northern Alabama during the late afternoon and became further organized as the clusters moved to the south and southwest. Between 8 and 9 pm, a bowing line of storms was located from Oxford to Starkville, growing larger by the minute, and picking up speed as wind gusts between 50 and 70 mph were taking shape.

A large bow echo quickly evolved and raced to the west-southwest, across Mississippi, through the evening at 50 to 60 mph. The line of storms produced widespread severe wind gusts around 60 mph with many locations seeing significant wind gusts between 75 and 80 mph. Tree and power line damage was widespread and significant along the line with the focus and most intense portion of the bow echo located within an axis from Louisville, MS to Jackson, MS to St. Joseph, LA.

Some of the most significant wind damage occurred across Winston, Neshoba, Leake and Scott counties. Here, thousands of trees were downed along with numerous power lines. Many roads were blocked by downed trees, especially across Scott County. Wind gusts across these areas likely peaked between 75 and 85 mph.

The bow echo was re-energized across Madison and Hinds Counties as the line clashed with pre-line storms. The most intense portion of the bow echo was re-focused as it impacted portions of southern Madison and Hinds County. The most intense portion of the line then dove southwest and impacted Copiah, Claiborne, Jefferson, Franklin and Adams Counties. As the line crossed the Mississippi River, the parishes of Tensas and Concordia saw the brunt of the damaging winds. Similar to areas across Central Mississippi, these locations received significant winds between 75 and 85 mph. Thousands of trees and numerous power lines were downed from the winds. Power outages were substantial as many locations were without power for 2 to 4 days.

Looking at this event in a historic perspective, it was likely the most significant and widespread wind event ever in August for our forecast area.

ASHLEY COUNTY --- 2.9 N HAMBURG [33.27, -91.81], 2.0 NE PORTLAND [33.25, -91.49], 2.4 SE WILMOT [33.02, -91.56], 2.0 N RAWLS [33.03, -91.88]

Numerous trees and power lines were blown	n down.			

A rare and widespread significant wind event impacted the NWS Jackson, MS forecast area during the evening of Aug 2nd and lasted into the early morning hours of Aug 3rd. Several clusters of storms developed across Northern Mississippi and Northern Alabama during the late afternoon and became further organized as the clusters moved to the south and southwest. Between 8 and 9 pm, a bowing line of storms was located from Oxford to Starkville, growing larger by the minute, and picking up speed as wind gusts between 50 and 70 mph were taking shape.

A large bow echo quickly evolved and raced to the west-southwest, across Mississippi, through the evening at 50 to 60 mph. The line of storms produced widespread severe wind gusts around 60 mph with many locations seeing significant wind gusts between 75 and 80 mph. Tree and power line damage was widespread and significant along the line with the focus and most intense portion of the bow echo located within an axis from Louisville, MS to Jackson, MS to St. Joseph, LA.

Some of the most significant wind damage occurred across Winston, Neshoba, Leake and Scott counties. Here, thousands of trees were downed along with numerous power lines. Many roads were blocked by downed trees, especially across Scott County. Wind gusts across these areas likely peaked between 75 and 85 mph.

The bow echo was re-energized across Madison and Hinds Counties as the line clashed with pre-line storms. The most intense portion of the bow echo was re-focused as it impacted portions of southern Madison and Hinds County. The most intense portion of the line then dove southwest and impacted Copiah, Claiborne, Jefferson, Franklin and Adams Counties. As the line crossed the Mississippi River, the parishes of Tensas and Concordia saw the brunt of the damaging winds. Similar to areas across Central Mississippi, these locations received significant winds between 75 and 85 mph. Thousands of trees and numerous power lines were downed from the winds. Power outages were substantial as many locations were without power for 2 to 4 days.

Looking at this event in a historic perspective, it was likely the most significant and widespread wind event ever in August for our forecast area.

Numerous trees and power lines were blown down across Adams County as an intense line of thunderstorms moved through the area toward the southwest. Tree damage was widespread as wind gusts ranged from 60 to 70 mph with the line of storms.

A rare and widespread significant wind event impacted the NWS Jackson, MS forecast area during the evening of Aug 2nd and lasted into the early morning hours of Aug 3rd. Several clusters of storms developed across Northern Mississippi and Northern Alabama during the late afternoon and became further organized as the clusters moved to the south and southwest. Between 8 and 9 pm, a bowing line of storms was located from Oxford to Starkville, growing larger by the minute, and picking up speed as wind gusts between 50 and 70 mph were taking shape.

Page 14 of 19 Printed on: 10/22/2008

A large bow echo quickly evolved an storms produced widespread severe mph. Tree and power line damage weecho located within an axis from Lou	e wind gusts around 60 mph with ma as widespread and significant along	ny locations seeing s the line with the foc	significant wind g	usts between 75 and 80
Some of the most significant wind do were downed along with numerous p gusts across these areas likely peak	power lines. Many roads were blocke	•		•
The bow echo was re-energized acro	oss Madison and Hinds Counties as t	the line clashed with	pre-line storms. 1	Γhe most intense portion

The bow echo was re-energized across Madison and Hinds Counties as the line clashed with pre-line storms. The most intense portion of the bow echo was re-focused as it impacted portions of southern Madison and Hinds County. The most intense portion of the line then dove southwest and impacted Copiah, Claiborne, Jefferson, Franklin and Adams Counties. As the line crossed the Mississippi River, the parishes of Tensas and Concordia saw the brunt of the damaging winds. Similar to areas across Central Mississippi, these locations received significant winds between 75 and 85 mph. Thousands of trees and numerous power lines were downed from the winds. Power outages were substantial as many locations were without power for 2 to 4 days.

Looking at this event in a historic perspective, it was likely the most significant and widespread wind event ever in August for our forecast area

A day after the extensive wind storms, scattered afternoon thunderstorms once again developed and produced penny to quarter sized

At least four trees were reported blown down in the	city of Hattiesburg.			
				s to some of the area.

Heavy rainfall, between 3 and 5 inches, caused a home to flood in Mayersville. This heavy rainfall also flooded much farm land and farm roads. Some crops were damaged by the flooded fields and standing water.

A few power lines were blown down around Petal as a couple trees and many large limbs were blown down on the lines.

An abnormal mid August weather pattern brought a large area of rain and thunderstorms to a large portion of the region. This activity brought locally heavy rain and some flash flooding to some areas along with a few isolated severe thunderstorms during the afternoon hours. Most of the region received 2 to 4 inches with a few locations a bit higher with 4 to 6 inches.
